# PROVOX® FreeHands HME™

Atos Medical is proud to announce the Provox FreeHands HME Automatic Tracheostoma Valve System. This new device combines a full heat and moisture exchanger (HME) with a new, patented, easy to operate automatic stoma valve that can be used with the Provox adhesive base plates. The valve operates with magnetic support, thus reducing the effort needed to keep the stoma closed during speech. The disposable HME cassette 'below' the valve adds humidity, temperature, filtration, and necessary resistance to the inspired air and protects the valve from mucus. The primary benefit of using the HME System is the reduction of mucus buildup and coughing.

## Additional Features:

- Adjustable Cough-Relief Valve
- Wearable during exercise
- Unique cleaning container
- Little effort needed to keep the valve closed

**Simple to use** - For the best results, initially the device should be adjusted to the individual's needs by a licensed clinician. Any further adjustments can be performed by the individual and are minimal. The device includes a color picture instruction for use.
